

## EN39 Standard Scaffold Tube For Building With 48.3mm Diameter

### Our Product Introduction

for more products please visit us on [bythaiscaffold.com](http://bythaiscaffold.com)

#### Basic Information

- Place of Origin: China
- Brand Name: Bythai Scaffolding
- Certification: SGS
- Model Number: BT01
- Price: \$5-\$18
- Packaging Details: In bundles
- Delivery Time: 7-15 days
- Payment Terms: TT/LC
- Supply Ability: 1000tons per month

#### Product Specification

- Diameter: 48.3mm
- Material: Galvanised Steel
- Standard: EN39
- Thickness: 3.2mm
- Yield Strength: 245N/mm<sup>2</sup>
- Weight: 6.4kg/m
- Name: Galvanised Scaffold Tube
- Application: Scaffolding
- Highlight: **EN39 Building Scaffold Tube,  
48.3mm Diameter Standard Scaffold Tube,  
Building Galvanised Scaffold Tube**

## Product Description:

Galvanised Scaffold Tube

### Product Overview

The Galvanised Scaffold Tube is a versatile and durable product that is widely used in the construction industry. It is specifically designed for use in scaffolding systems and is an essential component for any construction project. Made from high-quality galvanised steel, this tube is known for its strength and reliability. With a yield strength of 245N/mm<sup>2</sup>, it can withstand heavy loads and harsh weather conditions, making it the preferred choice for scaffolding applications.

### Application

The Galvanised Scaffold Tube is made from high-quality galvanised steel, which is known for its strength and corrosion resistance. Galvanisation is a process that involves coating the steel with a layer of zinc, which protects it from rust and other forms of deterioration. This makes the tube suitable for use in outdoor and harsh environments, ensuring its longevity and durability. The tube is manufactured in compliance with the EN39 standard, which sets the specifications for hot-dip galvanised tubes used in scaffolding systems. This ensures that the tube meets the required quality standards, making it a reliable and safe choice for construction projects.

### Weight

The Galvanised Scaffold Tube has a weight of 6.4kg/m, which makes it lightweight and easy to handle. This makes it convenient for transportation and installation, reducing the time and effort required for setting up the scaffolding system. Despite its lightweight, the tube still maintains its strength and stability, making it suitable for supporting heavy loads and providing a secure working platform for workers.

### Key Features

Made from high-quality galvanised steel

Yield strength of 245N/mm<sup>2</sup>

Complies with EN39 standard

Lightweight and easy to handle

Suitable for use in various scaffolding applications

Provides a stable and secure platform for workers

Corrosion-resistant and durable

Cost-effective

### Price

The price of the Galvanised Scaffold Tube varies depending on the size and quantity required. However, it is generally considered to be a cost-effective option for scaffolding systems, thanks to its durability and longevity. Compared to other types of scaffolding tubes, such as aluminum or steel tubes that are not galvanised, the Galvanised Scaffold Tube offers better value for money in the long run, as it requires less maintenance and replacement.

### Conclusion

The Galvanised Scaffold Tube is an essential product for any construction project that requires scaffolding. With its high-quality galvanised steel material, compliance with the EN39 standard, and lightweight yet strong design, it offers a reliable and cost-effective solution for creating stable and secure scaffolding structures. Its versatility and durability make it a popular choice among construction professionals and contractors, and its competitive pricing makes it an attractive option for any budget. Choose the Galvanised Scaffold Tube for your scaffolding needs and ensure a safe and efficient construction process.

**Technical Parameters:**

Parameter	Value
Name	Galvanised Scaffold Tube
Application	Scaffolding

Material	Galvanised Steel
Diameter	48.3mm
Tensile Strength	420N/mm2
Yield Strength	245N/mm2
Weight	6.4kg/m
Thickness	3.2mm
Standard	EN39
Surface Treatment	Galvanised
Related Keywords	scaffold aluminum tube, scaffold tube, tube scaffolding

## Applications:

Galvanised Scaffold Tube - Bythai Scaffolding

### Overview

The Galvanised Scaffold Tube by Bythai Scaffolding is a high-quality product that is widely used in construction, building maintenance, and other industrial applications. Made from galvanized steel, this scaffold tube is designed to provide superior strength and durability for all your scaffolding needs.

### Brand Name

The Galvanised Scaffold Tube is proudly manufactured and distributed by Bythai Scaffolding, a trusted and reputable brand in the scaffolding industry.

### Model Number

The model number for this product is BT01, making it easy to identify and order.

### Place of Origin

The Galvanised Scaffold Tube is proudly made in China, ensuring high-quality production and materials.

### Certification

This product has been tested and certified by SGS, a global leader in inspection, verification, testing, and certification services. This guarantees its reliability and safety.

### Price

The price for the Galvanised Scaffold Tube ranges from \$5 to \$18, making it an affordable choice for all your scaffolding needs.

### Packaging Details

Each tube is carefully packaged in bundles to ensure safe and secure transportation.

### Delivery Time

**Bythai Scaffolding Co.,Ltd**
